

NOOD-trap

Water trap which always stops odor from the drainage system, even at desiccated water trap

Does the trap in the floor drain dry out? Is odor coming from the drainage system? With NOOD-trap you prevent the odor and bad air from the drainage, always! Fits particularly in environments with little water consumption or during a long time unused.

The NOOD-trap is a PURUS invention and is a combination of water trap and mechanical odor trap, which give you double security. The NOOD-trap gives an efficient protection against back flow stop, bad air and pests. The spring-loaded cavity always ends tightly against the upper water trap.

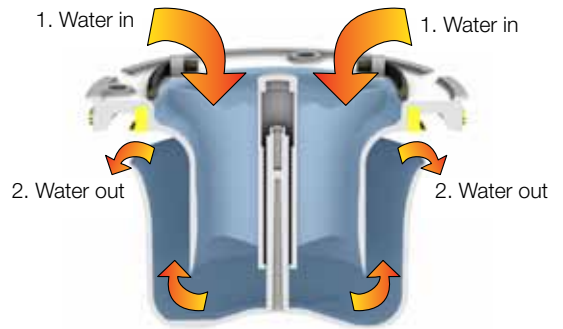

Available in both plastic and stainless steel.

NOOD-trap

The water trap is partly mechanically which means that it will stay closed when the water does not flow through. In closed position it prevents odor from the drainage system even if the water evaporates.

When the water flows through, the water trap opens automatically, incoming water flows down the drain.

Picture No.	Description	Material	Usages	ART. no
1	Flexi NOOD	PP	For Purus gullies with grating dim. 130 mm	713 84 14
2	Flexi NOOD with adapter-ring	PP	For Maxi Flex gullies	153448-546
